ECE 498MH SIGNAL AND IMAGE ANALYSIS

Homework 7
Fall 2013

Assigned: Friday, November 1, 2013

Due: Friday, November 8, 2013

Reading: SPF Chapter 12-3 covers almost this material, but for continuous \leftrightarrow discrete rather than discrete \leftrightarrow discrete

Problem 7.1

Consider the signal $x[n] = \cos(0.9\pi n)$.

(a) $y[n] = \cos(0.2\pi n)$ and $y[n] = \cos(-0.2\pi n)$ are both correct.

(b) (1)

$$z[n] = \begin{cases} \cos(0.1\pi n) & n \text{ even} \\ 0 & n \text{ odd} \end{cases}$$

(2)

$$z[n] = \frac{1}{2} \cos(0.1\pi n) + \frac{1}{2} \cos(0.9\pi n) \quad \text{for all } n$$

(c) $h[n] = \text{sinc}(\omega_c n)$ for any $0.1\pi < \omega_c < 0.9\pi$ will work.
